LIST OF THE COCCOIDEA SPECIES (HOMOPTERA) OF THE UNITED STATES VIRGIN ISLANDS

Prepared by S. Nakahara, Systematic Entomology Laboratory, Insect Identification and Beneficial Insect Introduction Institute, Agricultural Research Service, USDA, BARC-West, Beltsville, MD 20705

Abstract

Eighty-nine species of Coccoidea representing 56 genera and 8 families are recorded from the United States Virgin Islands. Island distributions and hosts are presented for each species.

Introduction

In their lists of the insect fauna of St. Croix, United States Virgin Islands (USVI), Beatty (1944) reported 35 nominate Coccoidea species and Miskimen and Bond (1970) reported 50 nominate Coccoidea species. Apparently, the Coccoidea faunas for the other two major islands in USVI, St. John and St. Thomas, have not been published. Based on information compiled up to June 30, 1981, from records and slide material in the U.S. National Museum (Natural History) (USNM), agricultural quarantine interception records, research of literature, and recent collections principally by C. E. Miller on St. Croix in 1978, 89 species of Coccoidea in 56 genera and 8 families are known to occur in USVI; St. Croix 78 species, St. John 21 species, and St. Thomas 64 species.

Although Saissetia oleae (Olivier) was reported from USVI by Beatty (1944) and Miskimen and Bond (1970), this species is not included here. Previously identified material of S. oleae from USVI in the USNM examined by the author was either S. miranda (Cockerell and Parrott) or S. neglecta De Lotto. Moreover, the author has not seen the species in recently collected material.

The host plants are presented for each species. However, only a few names of host plants were found for some of the polyphagous species such as Chrysomphalus aonidum (L.). Although Miskimen and Bond (1970) state that species indicated here with an asterisk (\*) attack many plants, infest a wide variety of ornamentals and fruit trees, or are common in St. Croix, they did not include the names of the plants in their paper.

The taxa are arranged alphabetically by family, genus, and species. Synonyms that appear only in the cited references are included in this list.

Acknowledgements

I am grateful to C. E. Miller, Plant Protection and Quarantine, APHIS, USDA, Hyattsville, Maryland, for collection records from St. Croix, and agricultural quarantine interception records at the port of San Juan, Puerto Rico. I thank R. H. Foote, Systematic Entomology Laboratory, ARS, USDA, Washington D.C., for reviewing the manuscript and suggestions, and A. B. Hamon and E. Ostanik, Florida Department of Agriculture and Consumer Services, Gainesville, for collection records.

St. Croix, St. John, St. Thomas

HOSTS:  
Allamanda, Aralia, Codiaeum, Dracaena, Gossypium (cotton),  
Hemigraphis palmata, Jasminum, Nerium (oleander), Philodendron

nipae  
(Maskell)

See Nipaecoccus nipae (Maskell)

sacchari  
Cockerell

See Saccharicoccus sacchari (Cockerell)

virgatus  
Cockerell

See Ferrisia virgata (Cockerell)

Puto  
barberi  
(Cockerell)

DISTRIBUTION:  
St. Thomas

HOSTS:  
Bauhinia tomentosa, Bougainvillea, Cestrum hortulanum,  
Codiaeum, Hibiscus

Saccharicoccus  
sacchari  
(Cockerell)

Pseudococcus sacchari Cockerell - Beatty 1944; Trionymus  
sacchari (Cockerell) - Miskimen and Bond 1970

DISTRIBUTION:  
St. Croix

HOSTS:  
Saccharum officinarum

Trionymus  
sacchari  
(Cockerell)

See Saccharicoccus sacchari (Cockerell)
